In order to insure the safety of district buildings and employees, the School Board has created a Safety Committee for the purpose of developing rules and regulations for implementing the Occupational Safety and Health Act (OSHA) of 1970.

The Safety Committee shall:

1. Meet monthly to formulate policies and procedures which will constitute a safety plan for the district;
2. Become familiar with current codes and regulations governing workplace safety under the OSHA Act;
3. Make recommendations concerning the purchase of new equipment and any physical changes to correct unsafe conditions, as referred to the committee;
4. Investigate causes of workplace incidents that lead to injury and recommend appropriate corrective measures;
5. Assess whether the policies and procedures of the district safety plan are followed by the person(s) designated to implement them.

Buildings and grounds are inspected monthly in accordance with the National Fire Protection Association (NFPA), OSHA and state sanitation reports and forwarded to the Maintenance office monthly.
